#### SUPPLEMENTARY INFORMATION:

##### *I. Abstract*

Pursuant to E.O. 14057 (Executive Order on Catalyzing Clean Energy Industries and Jobs Through Federal Sustainability), the Outer Continental Shelf Land Act, the National Environmental Policy Act, and the Coastal Zone Management Act, this request is for a reinstatement of an information collection with change. This information collection will focus on a different geographical location (the coast of Oregon) and include focus groups, which will help guide any revisions necessary to the survey instrument.

The BOEM Pacific OCS Region has an active Renewable Energy Program and is currently processing wind and wave energy lease requests. Due to the relatively steep continental slope and deep water off the West Coast, different types of offshore renewable energy technologies have been proposed for the Pacific Region than for the Atlantic Region. Outside of official public engagement forums, preferences about offshore wind energy development generally remain unknown for members of the public, as well as for groups who may not perceive themselves as stakeholders. Failure to gain the perspective of communities regarding potential benefits or impacts is problematic, particularly when latent stakeholders to local projects emerge late in the planning process.

The National Ocean Service (NOS) proposes to collect data on the opinions, values, and attitudes of Oregon Coast residents relative to offshore wind energy development. Respondents (age 18 years and older) will be randomly sampled from households in seven coastal counties. This information will be used by BOEM, NOAA, and others to understand what is important to communities; understand how differing values and perceptions across communities influence local receptivity to proposed development; and improve communication efforts targeted to residents, enabling agencies to more effectively and efficiently direct outreach and community inclusion activities. Additionally, NOAA has a vested interest in offshore wind energy development, from many perspectives, including as it relates to the resilience, well-being, and sustainability of coastal communities.

## *II. Method of Collection*
